Avoid contact with eyes or clothing. Avoid breathing dust. Wash thoroughly with soap and water after handling. Removal of frequently repeated skin contact while handling this material may cause allergic reaction in some individuals.

ENVIRONMENTAL HAZARDS

This product is toxic to fish and highly toxic to other aquatic organisms including shrimp. Use with care. This product is intended for applying to turf areas only by any body of water. Drift and runoff from treated turf may adversely affect aquatic organisms in adjacent aquatic sites. Do not apply directly to water, or to areas where surface water is present, or to interstitial areas below the mean high water mark. Do not apply when weather conditions favor drift from treated areas. Do not contaminate water when disposing of equipment washwaters.

Read entire label for Directions for Use including Storage and Disposal. Notice: Read the entire label. Use only according to label directions. Before using this product, read Warranty Disclaimer, Inherent Risks of Use, and Limitation of Remedies at end of Directions for Use. If terms are unacceptable, return at once unopened.

In case of emergency endangering health or the environment involving this product, call 1-800-993-5944.

Agricultural Chemical: Do not ship or store with food, feeds, drugs or clothing.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with the label directions.

Storage and Disposal

Do not contaminate water, foodstuffs, feed or soil by storage or disposal.

Store: Store this product in its original container in a dry, cool, secured storage area. DISPOSAL: Wastes resulting from the use of this product that cannot be used or chemically reprocessed should be disposed of in a landfill approved for pesticide disposal or in accordance with applicable Federal, state or local procedures.

EMPTY CONTAINER DISPOSAL: Do not reuse empty bag. Dispose of empty bag in a sanitary landfill, or should be disposed of in a landfill approved for pesticide disposal or in accordance with applicable Federal, state or local procedures.

Caution: May be harmful if swallowed, absorbed through the skin, or if inhaled. May be harmful if ingested. USE DIRECTIONS FOR TURF

Guidelines for Use

USE DIRECTIONS FOR TURF

This product may be used on seeded, sodded, or sprigged lawns and ornamental turfs that are well-established. Initial application of this product should be made only after turfgrasses have developed a vigorous root system, a uniform stand, and have received at least two mowings following seeding, sodding, or sprigging. Use this product on turfgrasses that are not well-established, or weakened by stress from weather, pests, disease, chemical, or mechanical influences, may increase the chances of turf injury.

Apply this product only to turfgrasses species listed on this label. This turfgrass species list is identified as "Tolerant Ornamentals" elsewhere in this label. This product is not labeled for ornamental uses.

USE PRECAUTIONS FOR TURF

This product may be used on seeded, sodded, or sprigged lawns and ornamental turfs that are well-established. Initial application of this product should be made only after turfgrasses have developed a vigorous root system, a uniform stand, and have received at least two mowings following seeding, sodding, or sprigging. Use this product on turfgrasses that are not well-established, or weakened by stress from weather, pests, disease, chemical, or mechanical influences, may increase the chances of turf injury.

Apply this product only to turfgrasses species listed on this label. This turfgrass species list is identified as "Tolerant Ornamentals" elsewhere in this label. This product is not labeled for ornamental uses.

GENERAL APPLICATION GUIDELINES:

per 1,000 sq ft per 1,000 sq ft per acre
Low 0.80 0.68 0.32
Medium 5.80 1.04 0.38
High 7.70 1.39 0.50

These settings are approximate for the application rate shown per 1,000 square feet. You may need to adjust the spreader setting depending on walking speed, spreader condition and product.

USE DIRECTIONS FOR TURF

The following turfgrass species are tolerant of the herbicide when applied as directed: Cool-Season Grasses: Bermuda grass, creeping 1 Agrostis palustris
Bentgrass, creeping 1 Agrostis palustris
Bluegrass, Kentucky 1 Festuca arundinacea
Poa pratensis
Medium 5.80 1.04 0.38
High 7.70 1.39 0.50

These settings are approximate for the application rate shown per 1,000 square feet. You may need to adjust the spreader setting depending on walking speed, spreader condition and product.

CONTROL OF CRABGRASS

Preemergence and Early Postemergence Control

This product provides preemergence control of crabgrass in established turf grasses (including the large, smooth, and southern species) when applied prior to germination and emergence of crabgrass seedlings. It also provides “early postemergence” control of crabgrass if applied prior to the 3-leaf stage of growth or first tiller at sites where turfgrass is cut relatively low (e.g., golf fairways), and (b) turf maintenance or weed control has not been conducted during the previous year. This product provides 4 - 6 months of preemergence crabgrass control. This program may also be used for early postemergence control of crabgrass up to the 3-leaf stage or first tiller at sites where turfgrass is cut relatively high (e.g., residential lawns).

Use Program 3 for preemergence control at sites where (a) turfgrass is cut relatively low (e.g., golf fairways), and (b) turf maintenance or weed control has been conducted during the previous year. This program provides postemergence control of crabgrass up to the 3-leaf stage or first tiller at sites where turfgrass is cut relatively low (e.g., residential lawns).

APPLICATION DIRECTIONS FOR TURF

Tips for Improved Weed Control

For best results, apply this product within a few days after mowing and delay mowing again for a few days to allow optimum weed control. In the spring, apply this product as soon as you can after the last frost has passed. The turf herbicide and fertilizer components in this product are not effective until activated by irrigation or rainfall. Performance is improved if application is followed by 1/2 inch of rainfall or sprinkler irrigation. Erosion control strips, if used, should be reduced or eliminated if activated by rainfall or irrigation within 12 hours after application.

Use of split (half-rate) applications spaced 5 - 10 weeks apart may provide improved weed control.

Maximum Use Rates (Applies to all Turfgrass Uses)

• Do not apply above the maximum rate (in pounds per 1000 sq ft) per year for long-term turfgrass use. Excessive use of this product may reduce turfgrass vigor.

• Do not allow people or pets to enter treated area until dust has settled.

• Do not graze livestock or feed forage cut from areas treated with this product.

Table 2 Tips for Improved Weed Control

• Do not use clippings from treated turf for mulching around vegetables or fruit trees.

• Do not reseed, overseed, or sprig areas treated with this product for at least 10 weeks after application.

• Do not apply this product to an established turfgrass area that has not been cut for 30 days prior to application or in the spring when crabgrass seedlings first become visible in the established turfgrass. The practical benefit of early postemergence crabgrass control is a 2 - 4 weeks longer period of time (window of application) during which crabgrass control can be achieved.

• Preemergence and Application Timing

This product may be applied as a single application, as a split application, or as a sequential application for crabgrass control in the spring, summer, or fall as described in the following use programs.

Spring Applications

For applications made in the spring or early summer, use an appropriate application rate corresponding to the turfgrass density, soil type, climate, or location (Region) of the turfgrass to be treated. The effective height of the turfgrass, and whether the application timing is critical to be preemergence or early postemergence. The duration of residual weed control provided by this product is directly related to application rate, but may vary depending on weather, weed pressure, turfgrass competitiveness, and the user’s location within a region.

Use Program 1 for preemergence control at sites where turfgrass is cut relatively high (e.g., homeowner lawns). This program provides 3 - 5 months of preemergence crabgrass control. This program will also provide early postemergence control of crabgrass up to the 3-leaf stage or first tiller at sites where turfgrass is cut relatively high (e.g., homeowner lawns).

Use Program 2 for preemergence control at sites where (a) turfgrass is cut relatively low (e.g., golf fairways), and (b) turf maintenance or weed control has been conducted during the previous year. This program provides postemergence control of crabgrass up to the 3-leaf stage or first tiller at sites where turfgrass is cut relatively low (e.g., residential lawns).

Use Program 3 for preemergence control at sites where (a) turfgrass is cut relatively low (e.g., golf fairways), and (b) turf maintenance or weed control has not been conducted during the previous year. This program provides 4 - 6 months of preemergence crabgrass control. This program may also be used for early postemergence control of crabgrass up to the 3-leaf stage or first tiller at sites where turfgrass is cut relatively high (e.g., residential lawns).
